What are the common mistakes when using neural networks to learn data? A: You might have some interesting list in there for sure. The major problem here is the reliability of the sources. Many of the entries have been copied or excerpted in multiple places by at least one author, including yourself. Taking a closer look at your list, I notice that much of it can be found in Ebookee, which is not a real credible source. This might also explain the inaccurate links. I noticed the following issues: Your own entry on Universal Machine Tools. Your entry has a link to Fabuil.com which is the local Google service in the Czech Republic, but the link is broken. The category of Deep Learning has 3 entries in this same list but they have no links. Stacked Denoising Autoencoder - It is not clear that these are Neural Networks. Stacked Denoising Autoencoders (SDAEs) are not Neural Networks. Perceptron is not a Neural Network. Perceptrons are perhaps some of the earliest models for Neural Networks. They can be seen as the forefather of ANNs. There are plenty of good resources on Perceptrons. Your entry on C# Enterprise Programming is also in multiple places. Dwarfs is a website, but so are many of your entries. As I was doing my research on Machine learning, I found plenty of reliable web pages. It is important to research it yourself as trying to shortcut the learning
