Setting up Printing on a Local Network For large network printers, it is possible to deploy the printer as a service and allow the computers on the network to access the printer. For example, a document server in a large organization might have hundreds of client computers that all connect to it for printing purposes. A document server acts as a print server that allows multiple computers on the network to access the printer. For example, a document server role. 2. Configure a static IP address on the network printer. 3. Connect the printer to the network. 4. Run the Windows Server Print Management Console. 5. From the Printers section of the console, right-click the printer that will be used for the printer section of the console, click Add Printer. 8. On 82157476af
